

TICKET #IE314_195

The lighting from the emergency exit lights at the exits is noticeable in the FSTD visual system.

Michael 13-04-2024

Internal discussions:

Spoke to engineering about the possibility of adding a “movable curtain or Shelf to block light towards the projectors

Spoke to Electrician about the possibility of adding a “kill Switch” at the IOS for instructors to have the ability of turning off the lights if desired.

Spoke to Phillip (Safety Manager) regarding are we allowed to kill the emergency exit lights .

Michael 26-04-2024

Michael Smith, Kyle Johnston, Dan Lynch, Mark Casey, Phillip Smythe on site.

Observing the 3 screens, we blocked the 2 emergency lights using a heavy cloth to see if there was any potential benefits or improvements to the Visuals “if” we killed the lights.

We all agreed after a discussion that there was no noticeable benefit of blocking or turning off the emergency lights and that the “hue” difference on the screens was not a result of the lights behind the SIM.

Lack of visible improvement versus the safety concerns regarding emergency lights indicate no benefit.

Closing Ticket.
